SUMMARY

Computer Science student (UFPR) with a focus on Artificial Intelligence and product vision. Currently a Full-Stack Developer at Zoop Mobility Network Inc., applying software engineering skills across the stack while deepening expertise in AI-driven automation. Incoming Mitacs Globalink Research Intern at the University of Alberta (May–Jul 2026), committed to advancing into cutting-edge AI research and development.

WORK EXPERIENCE

Full-Stack Developer

Jan 2026 - Present

– **Zoop Mobility Network Inc.**, Brazil

- Implemented a dynamic, user-configurable data table system with full-stack integration: React front-end, backend API requests, and database persistence.
- Designed and built a Claude Code + Playwright automation pipeline for QA and front-end visual regression testing.
- Developed React front-end features and conducted HCI and visual analysis across web applications.
- Wrote unit tests to ensure application reliability and maintainability.

Finance & Administration Board Member

Apr 2024 - Dec 2024

– **ECOMP - Junior Enterprise in Computing**, Curitiba, Brazil

- Led a research initiative on financial investment strategies, presenting a feasibility study to the board aimed at optimizing the organization's capital allocation.
- Analyzed project contracts and cash flow data to support the directorate's strategic financial planning.

RESEARCH EXPERIENCE

Undergraduate Researcher - Deep Learning

Aug 2024 - Mar 2026

– **Federal University of Paraná (UFPR)**, Curitiba, Brazil

- Investigating the impact of the ReLU activation function's non-differentiability point on neural network training dynamics and performance.
- Developing and training Convolutional Neural Networks (CNNs) on the MNIST and FashionMNIST datasets to analyze gradient flow during backpropagation, utilizing Python.

PROJECTS

Shooter Born in Heaven (2D Game Engine)

C & Allegro 5

Engineered a complete Run 'n Gun game (50 hrs), featuring a parallax scrolling renderer, state-machine animations, and an advanced, multi-phase boss AI.

MIPS-based Vector Processor

Designed and implemented from scratch a simplified MIPS vector processor, contributing to gain of experience in the hardware-software interface and low-level computer organization.

Computer Architecture

HONORS & AWARDS

Award of Merit

Calculus II Honors

National High School Model United Nations (NHSMUN)

Indepth calculus II lessons

New York, 2022

2024

EDUCATION

May - Jul 2026

2024 - Present

University of Alberta

Federal University of Paraná (UFPR)

Mitacs Globalink Research Intern

Bachelor of Science in Computer Science (on leave of absence)

Edmonton, Canada

Curitiba, Brazil

SKILLS

Languages

Web/Frontend

AI/ML

Developer Tools

Languages (Spoken)

Python, C, Java, JavaScript, LaTeX

React, Playwright

PyTorch, Scikit-learn, Pandas, NumPy, CNNs, Deep Learning Theory

Git, GitHub, Linux, Makefiles, GDB, logisim-evolution

Portuguese (Native), English (Fluent, C1), Spanish (Basic)
